Chapter 2  General information

2.1 Safety information

Please read the entire manual before the equipment is unpacked, set up or operated. Pay attention to all danger and caution statements. Personal injury or damage to the equipment could occur if they are not observed.

To ensure that the protection provided by this equipment is not impaired, do not use or install this equipment in any manner other than that specified in this manual.

2.1.1 Hazard information in this manual

DANGER
Indicates a potentially or imminently hazardous situation which, if not avoided, will result in death or serious injury.

WARNING
Indicates a potentially or imminently hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION
Indicates a potentially or imminently hazardous situation that could result in minor or moderate injury.

Important note: information that requires special emphasis.

Remark: information that supplements points in the main text.

2.1.2 Warning labels

Read all labels and notices attached to the equipment. Personal injury or damage to the equipment could occur if they are not observed. Any symbol on the equipment will appear along with a caution statement in the manual.

</tbody>
</table>
2.2 General information

2.2.1 Areas of application

The equipment is used for sampling aqueous liquids with a temperature between 0°C and 40°C.

2.2.2 Functional description

The equipment provides temporary storage for liquids of a specified volume so that they can be analyzed.

2.3 Scope of delivery

The equipment is supplied with a tube and a short manual.

If you require further information, you can order the operating instructions (refer to chapter 6 Spare parts and accessories, page 52) from the manufacturer or you can download it from the Internet.
Figure 3 Scope of delivery (SP5 S – SP5 S-MS)
Chapter 3  Installation

DANGER
Only qualified experts should conduct the tasks described in this section.

DANGER
Select an appropriate installation location for the instrument.

Plan out the mechanical mount before positioning poles or drilling holes. Make sure the mount has a sufficient bearing capacity. The dowels must be selected and authorized according to the condition of the wall. The manufacturer shall accept no liability if the instrument is installed incorrectly.

Plan how to lay cables and tubes and their path in advance. Lay the hoses, data cables and power cables without any bends so that they do not pose a tripping risk.

Do not connect the electrical supply to the mains if the equipment has not been wired and fused correctly.

Sufficiently protect the electrical power supply against short circuits.

For the external power supply, always connect a residual-current circuit breaker (trip current max.: 30 mA) between the mains and the system.

If the equipment is to be installed outdoors, place an overload protection between mains and system.

Products intended by the manufacturer for outdoor use offer a higher level of protection against the penetration of liquids and dust. If these products are connected to a mains outlet with a cable and plug rather than a permanently connected cable, the plug and outlet are much more susceptible to liquid and dust penetration. The operator must sufficiently protect the plug and outlet against liquid and dust penetration in accordance with local safety regulations. If the instrument is to be used outdoors, it must be connected to a suitable outlet with a protection type of at least IP44 (splash protection).
3.1 Mechanical installation

DANGER
Select an appropriate installation location for the instrument.

Plan out the mechanical mount before positioning poles or drilling holes. Make sure the mount has a sufficient bearing capacity. The dowels must be selected and authorized according to the condition of the wall.

The manufacturer shall accept no liability if the instrument is installed incorrectly.

Plan how to lay cables and tubes and their path in advance. Lay the hoses, data cables and power cables without any bends so that they do not pose a tripping risk.

Remark: For information on installation with optional accessories, refer to the relevant installation instructions.

Installation

3.2 Electrical connections

DANGER
Only qualified experts should conduct the tasks described in this section.

DANGER
Do not connect the electrical supply to the mains if the equipment has not been wired and fused correctly.

Sufficiently protect the electrical power supply against short circuits.

For the external power supply, always connect a residual-current circuit breaker (trip current max.: 30 mA) between the mains and the system.

If the equipment is to be installed outdoors, place an overload protection between mains and system.

If the mains plug of the power supply cable is removed, a suitable double-pole one-way switch must be installed immediately next to the display unit with clear labeling for the power supply.

Products intended by the manufacturer for outdoor use offer a higher level of protection against the penetration of liquids and dust. If these products are connected to a mains socket with a cable and plug rather than a permanently
Products intended by the manufacturer for outdoor use offer a higher level of protection against the penetration of liquids and dust. If these products are connected to a mains socket with a cable and plug rather than a permanently connected cable, the plug and socket are much more susceptible to liquid and dust penetration. The operator must sufficiently protect the plug and outlet against liquid and dust penetration in accordance with local safety regulations. If the instrument is to be used outdoors, it must be connected to a suitable outlet with a protection type of at least IP44 (splash protection).

Figure 38 Put the empty bottles in the housing
3.3.4 Connect the equipment to the mains

Make sure that:

- the equipment has been fully prepared for commissioning
- the values on the rating label correspond with those of the mains supply
- the correct plug has been attached or the direct wire has been implemented correctly
- the equipment can be put into operation without any risks.
Figure 40 Rating label

Figure 41 Possible connection configurations
4.1 Control unit operation

All the equipment functions are software-controlled.

4.1.1 Programming

The menu structure is similar to the directory structure of a computer hard drive and is divided into main menus and sub menus.

4.1.1.1 Keyboard layout/function

The equipment is programmed by the operator.

The key functions are configured as follows to enable highly intuitive operation:

<table>
<thead>
<tr>

<td></td>
</tr>
</tbody>
</table>

**Example:** A setting needs to be changed.

1. Press Enter.
   The cursor flashes.
2. Use the arrow keys to move the cursor on the desired position.
3. Press the Enter key.
   The selection is now confirmed and the program can be started.

![Figure 43 Start the program](image)
Operation

Depending on the program section

- an activity is started or
- the next menu item is automatically selected.

Remark: General rule:
- If you press the Back key
  - the action is cancelled or
  - the navigation takes one step back in the menu.

4.2 Normal operation

The described normal operation applies to several models (e.g. SP5 B, SP5 S, SP5 S-M, SP5 S-F, SP5 S-A).
The SP5 B, SP5 S and SP5 S-A models are displayed as examples in the figures.

4.2.1 Replace the sample bottles (SP5 B, SP5 S, SP5 S-M, SP5 S-F)

Chapter 5  Maintenance and cleaning

DANGER
Only qualified experts should conduct the tasks described in this section.

WARNING
Please observe the following points for the use of chemicals and/or waste water:

Wear protective clothing:
– Laboratory coat
– Protective eyewear
– Rubber gloves

5.1 Maintenance work
The sampler is maintenance-free. Thus the operator does not need to carry out any maintenance work.

5.2 Cleaning
5.2.1 Clean the housing and distributor

ATTENTION!
Manual rotation of the distributor can damage the drive.
Never rotate the distributor manually!

Clean the interior and exterior of the housing with a damp, lint-free cloth. Add commercial household cleaner to the cleaning water as required.
Figure 63 NEVER rotate the distributor unit manually

Figure 64 Clean the distributor unit
5.2.2 Clean the dosing vessel

Figure 65 Release the dosing vessel

Figure 66 Remove the dosing vessel
Maintenance and cleaning

Figure 67 Clean the dosing vessel

Figure 68 Install the dosing vessel
5.3 Troubleshooting

If the equipment does not function as required, check the fuse and replace if necessary.

5.3.1 Open the housing to change the fuse (SP5 B)

Figure 69 Open the lid and detach the cover (SP5 B)

Figure 70 Remove the safety cover (SP5 B)
5.3.2 Open the housing to change the fuse (SP5 S – SP5 S-MS)

Open the housing lid as described in figure 15, page 18 and figure 16, page 18.

5.3.3 Change the fuse

If the problem is not fixed after having checked or changed the fuse, please contact the customer service.
5.3.4 Reassemble the housing (SP5 B)

Figure 72 Install the safety cover (SP5 B)

Figure 73 Close the housing (SP5 B)
5.3.5 Reassemble the housing (SP5 S – SP5 S-MS)

Close the housing lid as described in figure 20, page 20, figure 24, page 23 and figure 25, page 23.

5.4 Decommissioning and storage of device

1. Remove all liquids and, if necessary, solid matter from the feed and drain lines and sample containers and clean as required.
2. Close all active programs.
3. Switch off the equipment.

Chapter 7  Warranty and liability

The manufacturer warrants that the product supplied is free of material and manufacturing defects and undertakes the obligation to repair or replace any defective parts at zero cost.

The warranty period is **12 months** from delivery resp. invoice date. Consumables and damage caused by improper handling, poor installation or incorrect use are excluded from this clause.

With the exclusion of the further claims, the supplier is liable for defects including the lack of assured properties as follows: all those parts that, within the warranty period calculated from the day of the transfer of risk, can be demonstrated to have become unusable or that can only be used with significant limitations due to a situation present prior to the transfer of risk, in particular due to incorrect design, poor materials or inadequate finish will be improved or replaced, at the supplier's discretion. The identification of such defects must be notified to the supplier in writing without delay, however at the latest 7 days after the identification of the fault. If the customer fails to notify the supplier, the product is considered approved despite the defect. Further liability for any direct or indirect damages is not accepted.

If instrument-specific maintenance and servicing work defined by the supplier is to be performed within the warranty period by the customer (maintenance) or by the supplier (servicing) and these requirements are not met, claims for damages due to the failure to comply with the requirements are rendered void.

Any further claims, in particular claims for consequential damages cannot be made.

Consumables and damage caused by improper handling, poor installation or incorrect use are excluded from this clause.
